# STATIC NEUTRAL ELEMENTS

## ◆ Quality in details

The widespread use of AISI 304 stainless steel with semi-gloss treatment, the rounded edges to allow quick and easy cleaning, the non-protruding and easy to grip handles, the soundproof doors and the sides, both with double wall, the care in the finishing along with surprising sturdiness due to high thickness, the reinforced tops and the unique design of the structure, are but some of the features that make EMAINOX products so commanding in the market-place.

## ◆ The range
